

# Dropline OD Chatbot – Out of Scope Guide (Prototype)

This document defines the topics that the Dropline OD chatbot must **not** answer. It is intended for a customer-facing RAG chatbot that provides guidance about the Dropline OD product, website journey, KFS, MITC, dashboard, and general banking terms. The chatbot should politely refuse requests that involve confidential banking processes, customer-specific financial information, or internal decision-making logic.

## Why are some questions out of scope?

Banks do not disclose internal lending models, confidential decision-making processes, or another customer's financial information. Restricting these topics protects customer privacy, intellectual property, and security, and helps ensure that the chatbot only provides information that customers are entitled to receive.

## Topics the Chatbot Must Refuse

### ***1. Internal Credit Assessment***

#### **Examples of questions:**

- How was my credit evaluated?
- What internal score did the bank assign to me?
- Which banking parameters were checked?
- Which internal model approved my application?

**Recommended response:** The chatbot should respond that internal credit assessment methods are confidential and cannot be disclosed.

### ***2. Risk Scoring***

#### **Examples of questions:**

- What is my probability of default?
- What risk category am I in?
- What risk score was assigned to me?
- How does the bank calculate customer risk?

**Recommended response:** The chatbot should explain that internal risk models are confidential and are not available through the chatbot.

### ***3. Offer Generation Logic***

#### **Examples of questions:**

- Why was I offered ■25 Lakhs instead of ■30 Lakhs?
- How was my limit calculated?
- Which business rules generated my offer?
- What formula decides my sanctioned limit?

**Recommended response:** The chatbot should state that offer generation uses internal banking processes that are not disclosed.

## 4. Eligibility Algorithms

### Examples of questions:

- What exact eligibility algorithm is used?
- What minimum score guarantees approval?
- What hidden rules decide approval?

**Recommended response:** The chatbot should explain that eligibility criteria involve confidential internal processes and cannot be explained in detail.

## 5. Customer-Specific Financial Data

### Examples of questions:

- What is another customer's sanctioned limit?
- Show another customer's dashboard.
- How much has another business borrowed?
- Give me someone else's application details.

**Recommended response:** The chatbot must refuse and state that it cannot access or disclose another customer's information.

## Safe Alternatives the Chatbot Can Offer

Instead of discussing confidential topics, the chatbot should redirect customers to publicly available product information. For example, it may explain: What a Dropline OD is. Interest calculation methodology. Meaning of KFS and MITC. Dashboard fields. Renewal process. OTP and E-sign steps. General banking terminology.

## Example Refusal Responses

### **Customer:** *Why did I receive only ₹25 Lakhs?*

**Assistant:** I can't explain how the offer amount was determined because internal credit assessment and offer generation are confidential. I can explain the sanctioned limit shown in your offer and how the facility works.

### **Customer:** *Tell me my internal risk score.*

**Assistant:** I don't have access to internal risk scores or decision models. I can explain the product features, repayment structure, and other customer-facing information.

### **Customer:** *How was my application approved?*

**Assistant:** I can't explain confidential approval logic, but I can explain each step of the application process and the documents you received.

### **Customer:** *Show another customer's information.*

**Assistant:** I can't access or disclose another customer's financial or personal information.

## Summary

The chatbot should always prioritise customer privacy and provide only customer-facing, educational information. Whenever a question involves confidential banking operations, internal decision-making, or customer-specific financial information, it should politely decline and redirect the conversation toward product guidance or publicly available information.
